

Welcome to [MY PORTFOLIO WEBSITE]

Made by Matthew Sandoval

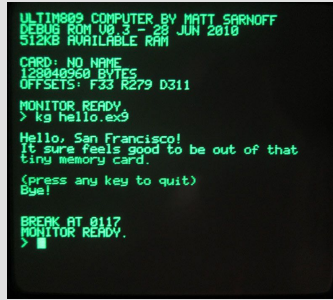

My initial Idea was to create an animated portfolio Website for my projects. This included...

- Creating a style of website that changed within projects or pages
- Multiple animations going in and out of the site
- A static background that shows my projects that can be jumped to

My idea has changed significantly in different ways...

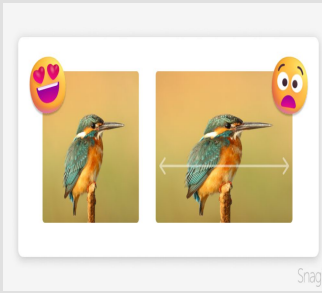

- There are no animations(yet)
- My initial project has changed to be a part of my site.
- The static background for my homepage is shorter but I plan on making it longer
- The idea of my style has changed

Inspirations and ideas:

console

I wanted the color scheme to look the same as a console system from a computer, I used green instead of white so it would pop out more

Media query

I made it so that the site would look the same on desktop and tablet but different on the phone.

Video tutorials

Tutorials for javascript that helped me overall and for javascript(it took me so many). These will be included in the references.

DEMO!

And code showoff

Ideas to improve on and for the future

To improve on I would like to...

- I nicer home page, with more length to it
- Possibly make the static movement page from before
- Overall more interactivity (javascript)

For the future ...

- Create more projects
- Make the animations
- Somehow incorporate 3d models
